

Experiment - 2

Student Name: Rakhi Channa

Branch: BE-CSE

Semester: 6th

Subject Name: System Design

Subject Code: 23CSH-314

UID: 23BCS10431

Section/Group: KRG_2B

Date of Performance: 14/1/26

Aim:

To design and analyze an **E-commerce System** by identifying its functional and nonfunctional requirements and representing the system architecture using a **draw.io diagram**.

Objectives:

1. To understand the working of a E-commerce system
2. To identify **functional requirements** of the system
3. To identify **non-functional requirements** such as performance and scalability
4. To design a high-level system flow using **draw.io**
5. To design a **DB schema** for the system using **ERD**.
6. To improve understanding of real-world system design concepts

Procedure-

1. Studied real-world E-commerce platforms such as Amazon and Flipkart.
2. Identified core components including users, products, carts, orders, inventory, and payments.
3. Listed functional requirements required for smooth E-commerce operations.
4. Analyzed non-functional requirements like low latency, scalability, and fault tolerance.
5. Designed a structured system design diagram using draw.io.
6. Designed a DB schema using DB scripts and ERD.
7. Reviewed the design to ensure scalability, data consistency, and clarity.

Functional Requirements -

- User registration and authentication
- Browse and search products by category
- Add products to cart
- Update or remove items from cart and place orders and process payments.
